IMPERIAL
TTXGP

The TTXGP is *the* zero-emission motorbike race breaking new ground, be part of it...

- Held on the famous Isle of Man TT circuit alongside the normal TT, the TTXGP brings the excitement and heritage of the TT to a new market.

- Attracting over 60,000 visitors annually, the TT is covered widely by TV, web and print media

- Imperial College has a year of development already invested in this bike resulting in a Suzuki Hayabusa K8 based rolling chassis with complete powertrain and solid progress towards the electric & aerodynamic packages. This year a team of sixteen students will complete the bike and bring it to race in the TTXGP

- A dedicated sub-team fine-tuning the Hayabusa's already impressive aerodynamic properties to work best with an electric powertrain - a critical factor on the gruelling 37 mile high speed TT mountain course

We are currently looking for sponsorship towards the 2010 race. We offer you extensive media coverage through clothing, the website and the bike itself at this groundbreaking zero-carbon motorsport event, whilst working with one of the world's top universities with the ability to provide you with real-world performance data. If you would be interested in taking this opportunity further, we look forward to hearing from you.
